

Using Advanced Select List

Advanced Select List custom field behaves the same way as any other custom field. While browsing your JIRA project issues just note, that the custom fields are by default added to the end of the **Details** section of your issue. You will probably find all the newly added custom fields here.

Custom field section at the issue detail

To edit the issue:

- Browse to the issue, where you want to change your **Advanced Select List** value.
- Locate your custom field and move mouse pointer over it. The pen icon appears next to the value field.
- Click the pen icon to enable the value field for editing.
- Select new value from the drop-down list.
- Confirm your choice by clicking **Submit** icon
