

Searching with Advanced Select List

This chapter briefly describes how to search for issues with defined value of custom field based on **Advanced Select List** and how to save the search as a filter, which can be used to define custom board.

Note

For further details refer to [Atlassian JIRA Software documentation](#).

- [Using Advanced Select List](#)

To search for issues with chosen **Advanced Select List** option value, follow next steps:

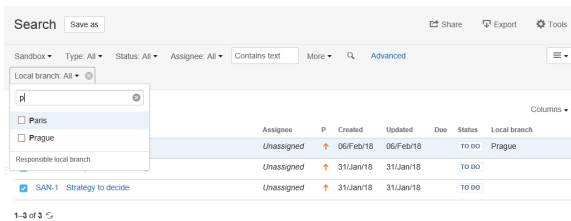

- Use **Issues/Search** for issues menu item to navigate the **Search** form.
- Define the filtering options.
- Your custom field is available by clicking **More** button at filtering section.
- Find your custom field by editing the search field.
- Check the box next to custom field name to add it to filter.

Adding filtering option

- Now you can see your new filtering option. Fill in the value to locate your chosen value and check appropriate options.
- You see the search result of your query.
- You can save the search result as a filter by clicking the **Save as** button at the top of the page.

Searching with Advanced Select List

To create a board based on saved filter:

- Navigate to the boards list by using **Boards/View all boards** menu item.
- Click **Create board** button at the top of the page and then choose one of the predefined boards type (check **Board from an existing Saved Filter** option).
- Choose the **Board name** and the **Saved filter** you have created in previous steps.
- After clicking the **Create board** button you obtain the specified board where the issues are filtered by your Advanced Select List custom field.
