

Deleting Values

Even though you have the possibility to [turn the Activity of the value off](#), you might find useful to reduce the list of the option values. To delete a value from the list, do the following:

- Go to the [Configure Options form](#).
- Notice the table with the list of values. Each value has the option to be deleted by clicking **Delete** link in the **Operations** column of the table.
- Click the **Delete** link in the **Operation** column of selected row. The row disappears from the table.
- Click **Save** at bottom of the form to save values into database.
